SUMMARY

Full-stack Software Engineer with 3+ years of experience designing and building scalable, high-performance applications in healthcare and finance. Strong expertise in **Java, Spring Boot, React, REST APIs, Kafka, microservices, SQL/NoSQL databases, and CI/CD pipelines**. Proven ability to solve complex engineering challenges, optimize workflow systems, and deliver end-to-end production-ready solutions

SKILLS

- Frontend:** Angular (v8+), React, Next.js, TypeScript, JavaScript ES6, RxJS, Redux/NGRX, HTML5/CSS3, Responsive UI
- Backend :** Java 8+, Spring Boot, Spring MVC, RESTful APIs, Microservices, JPA/Hibernate, Node.js
- Infrastructure:** PostgreSQL, Oracle, Redis, Docker, AWS ECS/Lambda/RDS/S3
- Messaging & Integration:** JMS, Kafka
- CI/CD & Tools:** Git, Jenkins, GitLab CI, Maven, Gradle, Sentry, Grafana, Figma, Jira
- Testing:** JUnit, Jest, Cypress, Jasmine
- Practices:** System Design, API Architecture, Microservices, Performance Optimization, CI/CD, Agile, Code Reviews, Documentation

PROFESSIONAL EXPERIENCE

Software Engineer Intern, Leverage Technologies, USA September 2023 – Present

- Developed automated systems to **extract patient records and billing details from PDFs**, leveraging NLP and custom parsers to increase claim-processing speed by **60%** and reduce manual review hours.
- Built an **AI-powered legal assistant** using domain-tuned LLMs to help attorneys quickly analyze patient records, identify recoverable claims, summarize medical histories, and flag inconsistencies, improving case preparation efficiency by **40%**.
- Designed and deployed a secure **AWS-based infrastructure** (Lambda, API Gateway, S3, DynamoDB, ECS) to handle large volumes of patient and billing data with aligned policies and encryption.
- Re-architected backend services in **Java + Spring Boot**, improving record lookup and claims-matching performance by **30%** through optimized queries, batching, and Redis caching.
- Integrated Kafka-based asynchronous pipelines for reliable **document ingestion, OCR processing, and claim-event messaging**, eliminating data loss during high-volume workflows.
- Built a streamlined **claims dashboard** in **Angular** using reusable UI components, enabling paralegals and attorneys to review case statuses, audit trails, recovered amounts faster and reducing daily workload.
- Enhanced batch and background processing modules (Spring Batch) to support **parallel OCR, indexing, and claims categorization**, boosting end-to-end throughput by **45%**.
- Established automated test suites using JUnit, Jasmine, and implemented CI/CD pipelines, raising code coverage to **85%** and reducing production incidents by **25%**.
- Integrated **Prometheus/Grafana with structured logging pipelines** to track OCR success rates, document ingestion issues, and API behaviors, improving log visibility and reducing troubleshooting time by 40%.

Associate Software Engineer, Ahex Technologies Private Limited, India June 2020 – January 2023

- Improved **patient-data transaction latency from 900ms to 200ms** by optimizing Spring Boot service queries, adding targeted indexing, and redesigning healthcare API payloads for high-volume clinical workflows.
- Built **interactive clinical dashboards** in Angular/TypeScript for appointments, vitals, billing, care plans, and patient timelines; resolved rendering bottlenecks using memoization and virtualized tables for large EMR datasets.
- Implemented a **real-time care-event monitoring system** using Spring Boot scheduled jobs and rule-based engines to detect abnormal vitals or missed treatments, improving alert accuracy by **18%**.
- Created a reusable **Angular UI component library** for patient records, care-team widgets, chart visualizations, and forms—reducing UI development time by **60%** and ensuring clinical UI consistency.
- Integrated **secure REST APIs** using Spring Security, input sanitization, JWT/OAuth2, and endpoint throttling to safeguard PHI and eliminate repeated suspicious-access attempts.
- Developed **asynchronous workflows** for lab results, documents, imaging uploads, and patient-event routing using Redis queues, Kafka and parallel Spring Boot batch jobs.
- Built a **WebSocket-based real-time chat system** enabling patients, care staff, and providers to communicate instantly—with typing indicators, read receipts, and notification orchestration.
- Designed and deployed **microservices architecture** for patient profiles, appointments, care-plans, billing, and communication services, enabling horizontal scaling and faster independent deployments.
- Implemented **rich data visualizations and clinical graphs** (vitals trends, medication adherence, appointment patterns) to help care teams make faster data-driven decisions.
- Collaborated closely with clinicians, compliance, and operations teams to translate complex healthcare workflows into backend logic and intuitive front-end patient-care experiences.

EDUCATION

- Master of Science in Computer Science University Of Central Missouri, USA

CERTIFICATIONS

- Certified in System Design LLD and HLD, demonstrating expertise in architecting scalable, efficient systems with a strong focus on design principles, performance optimization, and real-world application.
- Achieved AWS Certified Developer Associate which strengthened cloud deployment expertise and improved development to production delivery cycles.
